## Data Flow Diagram

Create a Data Flow Diagram (DFD) to show how data moves through your system - between external entities, processes, and data stores. Use the symbol legend below as a guide.

### DFD Symbol Legend

| Symbol                                                                                                                                 | Name            | Description                                                                                                                             |
|----------------------------------------------------------------------------------------------------------------------------------------|-----------------|-----------------------------------------------------------------------------------------------------------------------------------------|
|  Oval / Rounded shape                               | External Entity | A person, organization, or system outside the project that sends or receives data (e.g., User, Gemini AI API, E-commerce APIs).         |
|  <b>1 Process</b><br>Rectangle with numbered header | Process         | An activity that transforms incoming data into outgoing data (e.g., Validate Input, Generate Recommendation, Fetch Data, Notification). |
|  Rectangle (solid fill, no number)                  | Data Store      | A place where data is held for later use (e.g., User Database, Recommendation History, Product Database).                               |
|  → Labeled arrow                                    | Data Flow       | The movement of data passed.                                                                                                            |

### Example — Level 1 DFD for PocketSmart AI

The diagram below illustrates a detailed Level 1 Data Flow Diagram for PocketSmart AI, showing how data flows between the user, four key processes, data stores, and external APIs to generate personalized budget and product recommendations.
